## Product Introduction

Anti-Fog inserts have the ability to absorb moisture when the SP360 4K camera is being used in cold weather, underwater or in similar environments. These inserts can be useful when there is a wide variance in temperature between the inside and outside of the SP360 4K camera. Using these Anti-Fog inserts could help prevent fog or unwanted moisture from collecting inside or around the camera's lens which could affect the best outcome of 360° photos and videos.

Thickness: 0.65mm

## Installation Method:

- Install the Anti-Fog insert on the top surface of the camera body as shown in figure ①.
- Open the waterproof housing and place the camera as shown in figure ②.
- Fasten the hinged lock as shown in figure ③.

## Notes:

**Anti-fog inserts are intended to absorb moisture. Please make sure the insert is dry before using (Heat it in a 100°C oven for around 10 minutes or blow dry it for more than 10 minutes). Each anti-fog insert can be reused up to 3-4 times.**

**Anti-Fog inserts should be stored in a sealed container or bag and be placed in a dry environment when not in use.**

Using a third party anti-fog solution in conjunction with our anti-fog inserts could enhance the performance and overall outcome of your 360° photos and videos. Please always refer to the manufacturer's instructions.
